IN THE CLAIMS

1. (Original) An electrochemical cell, comprising:

a first electrode and a second electrode with a membrane disposed there between and in ionic communication with the first electrode and the second electrode; and

a sintered porous support member disposed on a side of the membrane opposite the second electrode, wherein the support member comprises a first portion on first side of the support member proximate the membrane and a second portion disposed on a side of the first portion opposite the membrane, wherein the second portion has a second portion porosity different from a first portion porosity.

- 2. (Original) The electrochemical cell of Claim 1, wherein the second portion porosity is greater than the first portion porosity.
- 3. (Original) The electrochemical cell of Claim 2, wherein the first portion porosity is less than or equal to about 60%.
- 4. (Original) The electrochemical cell of Claim 3, wherein the first portion porosity is about 35% to about 50%.
- 5. (Original) The electrochemical cell of Claim 2, wherein the second portion porosity is greater than or equal to about 50%.

- 6. (Original) The electrochemical cell of Claim 5, wherein the second portion porosity is about 50% to about 70%.
- 7. (Original) The electrochemical cell of Claim 1, wherein the support member comprises a third portion disposed on a side of the second portion opposite the first portion, wherein the third portion has a third portion porosity that is less than or equal to the second portion porosity.
- 8. (Original) The electrochemical cell of Claim 1, wherein the support member comprises a plurality of layers, wherein each layer has a layer porosity of greater than or equal to a previous layer.
- 9. (Original) The electrochemical cell of Claim 1, wherein the support member is a single layer comprising a decreasing porosity gradient from the first side toward a second side disposed opposite the first side.
- 10. (Original) The electrochemical cell of Claim 1, wherein the support member further comprises a second side comprising a channel.
- 11. (Original) The electrochemical cell of Claim 10, wherein the channel extends from an inlet disposed proximate an edge of the side to a terminus disposed proximate a geometric center of the side.

- 12. (Original) The electrochemical cell of Claim 10, wherein the channel extends from an inlet disposed proximate an edge of the side to an outlet disposed proximate the same or a different edge of the side.
- 13. (Original) The electrochemical cell of Claim 1, wherein the second portion comprises higher porosity regions and lower porosity regions.
- 14. (Original) The electrochemical cell of Claim 1, further comprising a pressure pad disposed in physical and electrical communication with the support member.
- 15. (Original) The electrochemical cell of Claim 1, further comprising an additional sintered porous support member disposed on a side of the membrane opposite the support member.
- 16. (Original) The electrochemical cell of Claim 15, wherein the additional support member comprises the second electrode.
- 17. (Original) The electrochemical cell of Claim 15, wherein the additional support member further comprises a first additional portion on first side of the additional support member proximate the membrane and a second additional portion disposed on a side of the first additional portion opposite the membrane, wherein the second additional portion has a second additional portion porosity different from a first additional portion porosity.

8602460505

- (Original) The electrochemical cell of Claim 17, wherein the second 18. additional portion porosity is greater than the first additional portion porosity.
- (Original) The electrochemical cell of Claim 1, wherein the support 19. member further comprises the first electrode.
 - (Original) An electrochemical cell, comprising: 20.
- a first electrode and a second electrode with a membrane disposed there between and in ionic communication with the first electrode and the second electrode;
- a flow field consisting essentially of a sintered porous support member disposed in electrical and physical communication with the first electrode; and
- a pressure assembly disposed in physical and electrical communication with the flow field.
- (Original) The electrochemical cell of Claim 20, wherein the support 21. member further comprises a first portion adjacent the membrane and a second portion on a side of the first portion opposite the membrane, and wherein the second portion has a second portion porosity different from a first portion porosity.
- (Original) The electrochemical cell of Claim 20, wherein the second 22. portion porosity is greater than the first portion porosity.
 - (Original) The electrochemical cell of Claim 20, wherein the support 23.

member further comprises the first electrode.

- 24. (Original) The electrochemical cell of Claim 20, wherein the support member is configured to support the membrane at pressures of greater than or equal to about 100 psi.
- 25. (Original) The electrochemical cell of Claim 24, wherein the pressures are greater than or equal to 500 psi.
- 26. (Original) The electrochemical cell of Claim 20, wherein the porous support member comprises a channel.
- 27. (Original) The electrochemical cell of Claim 20, wherein the pressure pad assembly is a pressure pad.
- 30. (Previously Presented) The electrochemical cell of Claim 1, wherein the channel is disposed between the first portion and the second portion.
- 31. (Previously Presented) The electrochemical cell of Claim 1, wherein the first portion is a first layer and the second portion is a second layer.

32. (Previously Presented) The electrochemical cell of Claim 21, wherein the first portion is a first layer and the second portion is a second layer.
